

CrushedCRMs™ for Fire Assay

The use of Pulverised CRMs in Fire Assay can be problematic. CrushedCRM™ brings the following solutions:

- CrushedCRM™ - Pre-Mixed test for errors in preparation and are blind to the lab, unlike pulverised gold CRMs, which do not test for mistakes in preparation and are not blind to the lab.

Our Pre-Mixed product is specifically designed for Fire Assay. Our Custom product can also be designed for use in Fire Assay. The key benefits are:

- They are truly blind to the lab as they are submitted with the drill samples.
- The use of the Pre-Mixed 2kg tests the sample preparation.
